

# BBR MALT MILL

Entirely constructed of stainless steel and aluminum, **the BBR malt mill** presents the characteristics of absolute excellence in both quality of construction and machining of various types of malts and grains.

It is made in two different models:

**M50E:** electric drive with motor that is able to grind over 50kg/h of malt, limiting the production of flour, to the advantage of the quality of the brewing process and the beer too.

**M100E:** electric drive with robust motor that is able to grind over 100kg/h of malt. It is equipped with a loading hopper with capacity of 5 kg with the support base has a greater width.

Both models have knurled rollers made of hardened stainless steel adjustable distance from

0,5 to 3,5 mm. This feature allow the brewer to completely manage the type of desired particle size for any type of cereal used. The self-lubricating bushings and wear give the absolute guarantee of sturdiness and durability.

	YIELD	DIMENSIONS	ELECTRICAL SUPPLY
<b>M50E</b>	50 Kg/h	380x430x230H Peso: 10kg	230V 50Hz
<b>M100E</b>	100 kg/h	530x700x350H Peso: 17Kg	230V 50Hz
